MEI INDEX SPECIFICATION

The minimum efficiency index (MEI) is a measure of the quality of a pump size in respect to its mean efficiency. The minimum efficiency index is based on the hydraulic efficiency and on the head at the best efficiency point.

The efficiency of a pump with trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to a reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.

The operation of these water pumps with variable duty points may be more efficient and economical when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system.

MEI = 0.4 for ESCC 2900 rpm

MEI = 0.7 for ESCC 2900rpm

MEI = 0.4 for ESOB 2900 rpm

MEI = 0.7 for ESOB 2900rpm

3(.)SF 32-125/1.1 and 3(.)PF 32-125 (1.1kW) MEI > 0.40 – impeller diameter = 133 mm

Rotation speed ≈2900 min⁻¹
 Test standard: ISO 9906:2012 - Grade 3B
